Climate TRACE Inventory June 2025 (Version 4.4.0)

Data Licensing, Schema, and Citation Guide

l .	All Climate TRACE data is freely available under the Creative Commons Attribution 4.0 International Public License, unless otherwise noted below.
Suggested citation format:	For sources from different sectors or global data accessed and downloaded, please cite as: Climate TRACE (2025), <i>Climate TRACE Emissions Inventory v4.4.0</i> , https://climatetrace.org [Date Accessed]. For sector-specific citations, see below.
	The emissions models provide our current best estimates of emissions, and we are committed to continually increasing the accuracy of the models on all levels. Please review our terms of use (https://climatetrace.org/terms) and the sector-specific methodology documentation (https://climatetrace.org/downloads) before using the data. If you identify an error or would like to participate in our data validation process please contact us (coalition@climatetrace.org).

Files available:	Description
detailed_data_schema.csv	File with the mapping and explanation of what each data column means for all various subsectors.
<subsector-name>_emissions_sources.csv</subsector-name>	File containing the emissions data at the emissions source level across all subsectors monitored by Climate TRACE.
<subsector-name>_country_emissions.csv</subsector-name>	File containing the emissions data at the country level across all subsectors monitored by Climate TRACE.
<subsector-name>_emissions_sources_confidence.csv</subsector-name>	File specifying the confidence classification of the reported data from emissions sources present on the file <subsector-name>_emissions_sources.csv</subsector-name>
<subsector-name>_emissions_sources_ownership.csv</subsector-name>	File containing the ownership information of the emissions sources on the file <subsector-name>_emissions_sources.csv</subsector-name>
-	name>_emissions_sources.csv a for is available on the website at https://climatetrace.org/sectors. For some sectors. Climate

A full list of emissions sectors that Climate TRACE provides data for, is available on the website at https://climatetrace.org/sectors. For some sectors, Climate TRACE has geospatial data beyond what is included in this download package. To request that data, please contact us (coalition@climatetrace.org).

v.4.4.0 sundates to the Clima	to TD ACE inventour
v4.4.0 updates to the Clima	tte i kace inventory

specific and Climate	
TRACE-wide updates	

Metadata description for: <subsector-name>_emissions_sources.csv</subsector-name>			
Data-attribute	Definition		
source_id	The internal Climate TRACE identifier for each individual source of emissions. Every distinct emissions source is defined by a unique combination of facility name, country, source type, and subsector.		
source_name	Name of the entity or source that produced the emissions. Where exact names were not available, Climate TRACE has created descriptive names based on source location.		
source_type	Description of the emission source classification.		
iso3_country	Corresponds to the ISO 3166-1 alpha-3 specification of the country where the entity is physically located.		
sector	The high level sector that the subsectors fall under (i.e. Agriculture, Mineral Extraction, etc.) The more granular sector name for the emissions being measured (i.e. rice-cultivation, copper-mining, etc.)		
start_time	The time using Coordinated Universal Time (UTC) of emissions, either as an instance of start time of observation.		
end_time	The time using Coordinated Universal Time (UTC) of emissions, either as an instance of end time of observation. The time using Coordinated Universal Time (UTC) of emissions, either as an instance of end time of observation.		
lat	Approximate latitude location of the source. When source is an aggregation of smaller emissions sources (e.g county, urban area etc) the latitude centroid of the geometry is provided.		
lon	Approximate longitude location of the source. When source is an aggregation of smaller emissions sources (e.g county, urban area etc), the latitude centroid of the geometry is provided.		
geometry_ref	Corresponds to the reference id in the global geopackage at climatetrace.org/data. This id allows matching an aggregated emission source with its boundary geometry.		
	Air emissions which are reported in metric tonnes. Climate TRACE reports greenhouse gas emissions from Carbon Dioxide (CO2), Methane (CH4) and Nitrous oxide (N2O) as well as all three gases combined and expressed in CO2-equivalents are available (100 year and 20 year time frame using IPCC Sixth Assessment Report (AR6) Global Warming Potentials). Climate TRACE reports the air pollutants: Particulate Matter (PM2.5), Black Carbon (BC), and Organic Carbon (OC), sulphur dioxide (SO2), Volatile Organic Carbon (WOCs), Carbon Managide (CO), Appropria (NH2), and Nitrogen Orides (NOS)		
gas	Compounds (VOCs), Carbon Monoxide (CO), Ammonia (NH3), and Nitrogen Oxides (NOx). Quantity of gas emitted in metric tonnes. If reported quantity is zero, it means that gas is not emitted. If reported quantity is		
emissions_quantity	empty/null/N-A, data is not yet available.		
temporal_granularity	Resolution of the data available.		
activity	Activity of the entity producing the emissions, not including units. See definition of "capacity". Activity data are not available for some subsectors due to licensing restrictions.		
activity_units	Units of reported "activity". Climate TRACE used SI base units and standard abbreviations when possible. https://www.nist.gov/pml/owm/metric-si/si-units		
emissions_factor	Emissions factor of reported activity. Emissions factors vary by sector, subsector, and source type. Emission factors data are not available for some subsectors due to licensing restrictions.		
emissions_factor_units	Units of reported "emissions factor" field. Climate TRACE used SI base units and standard abbreviations when possible. https://www.nist.gov/pml/owm/metric-si/si-units		
capacity	Capacity of the entity producing emissions, not including units. Because 'capacity' has different definitions in different sectors. Please see the capacity units column for detailed information.		
capacity_units	Units of reported "capacity" field. Climate TRACE used SI base units and standard abbreviations when possible. https://www.nist.gov/pml/owm/metric-si/si-units Compared to the ratio of the actual course output (activity) to the source conscitt. When date not evaluable, this is not relevant for		
capacity_factor	Corresponds to the ratio of the actual source output (activity) to the source capacity. When data not available, this is not relevant for the subsector.		
capacity_factor_units	Units of reported "capacity_factor" field. If units are not available, this is not relevant for the subsector. Additional data field available for the subsector. For description of this field and its meaning, please reference to other1_def. When		
other1	this field is null, blank or na, no additional data is provided to the subsector.		
other1_def	Definition of reported data of Other1 field.		
other2	Additional data field available for the subsector. For description of this field and its meaning, please reference to other2_def. When this field is null, blank or na, no additional data is provided to the subsector.		
other2_def	Definition of reported data of Other2 field.		
other3	Additional data field available for the subsector. For description of this field and its meaning, please reference to other3_def. Whe this field is null, blank or na, no additional data is provided to the subsector.		
other3_def	Definition of reported data of Other3 field.		
other4	Additional data field available for the subsector. For description of this field and its meaning, please reference to other4_def. When this field is null, blank or na, no additional data is provided to the subsector.		
other4_def	Definition of reported data of Other4 field.		
other5	Additional data field available for the subsector. For description of this field and its meaning, please reference to other5_def. When this field is null, blank or na, no additional data is provided to the subsector.		
other5_def	Definition of reported data of Other5 field.		
other6	Additional data field available for the subsector. For description of this field and its meaning, please reference to other6_def. When this field is null, blank or na, no additional data is provided to the subsector.		
other6_def	Definition of reported data of Other6 field.		
other7	Additional data field available for the subsector. For description of this field and its meaning, please reference to other7_def. When this field is null, blank or na, no additional data is provided to the subsector.		
other7_def	Definition of reported data of Other7 field.		
other8	Additional data field available for the subsector. For description of this field and its meaning, please reference to other8_def. When this field is null, blank or na, no additional data is provided to the subsector.		
other8_def	Definition of reported data of Other8 field. Additional data field available for the subsector. For description of this field and its meaning, please reference to other9_def. When		
other9	this field is null, blank or na, no additional data is provided to the subsector.		
other9_def	Definition of reported data of Other9 field. Additional data field available for the subsector. For description of this field and its meaning, please reference to other10_def. When		

Metadata description for: <subsector-name>_country_emissions.csv</subsector-name>		
Data-attribute	Definition	
iso3_country	Corresponds to the ISO 3166-1 alpha-3 code for the country.	
start_time	The time using Coordinated Universal Time (UTC) of emissions, either as an instance of start time of observation.	
end_time	The time using Coordinated Universal Time (UTC) of emissions, either as an instance of end time of observation.	
sector	The high level sector that the subsectors fall under (i.e. Agriculture, Mineral Extraction, etc.)	
subsector	The more granular sector name for the emissions being measured (i.e. rice-cultivation, copper-mining, etc.)	
gas	Air emissions which are reported in metric tonnes. Climate TRACE reports greenhouse gas emissions from Carbon Dioxide (CO2), Methane (CH4) and Nitrous oxide (N2O) as well as all three gases combined and expressed in CO2-equivalents are available (100 year and 20 year time frame using IPCC Sixth Assessment Report (AR6) Global Warming Potentials). Climate TRACE reports the following air pollutants: Particulate Matter (PM2.5), Black Carbon (BC), and Organic Carbon (OC), sulphur dioxide (SO2), Volatile Organic Compounds (VOCs), Carbon Monoxide (CO), Ammonia (NH3), and Nitrogen Oxides (NOx).	
emissions_quantity	Quantity of gas emitted in metric tonnes. If reported quantity is zero, it means that gas is not emitted. If reported quantity is empty/null/N-A, data is not yet available.	
emissions_quantity_units	Units of reported "emissions_quantity" field. Climate TRACE used SI base units and standard abbreviations when possible. https://www.nist.gov/pml/owm/metric-si/si-units	
temporal_granularity	Resolution of the data available.	
created_date	Date country emissions quantity was added to the Climate TRACE database.	
modified_date	Last date on which any updates were made to the dataset for the specific country.

	he following sources. The stated usage is not warranted to be error free and does not imply the expression of any opinion whatsoever E Coalition and its partners concerning the legal status of any country, area or territory or of its authorities, or concerning the	
delimitation of its borders.	E Coantion and its partiers concerning the legal status of any country, area of territory of of its authorities, of concerning the	
Country, state province,	Global Administrative Areas (GADM) project (Version 4.1 released on 16 July 2022) along with their corresponding ISO3 codes,	
county/ district level	and with the following adaptations:	
	- HKG (China, Hong Kong Special Administrative Region) and MAC (China, Macao Special Administrative Region) are reported at	
	GADM level 0 (country/national);	
	- Kosovo has been assigned the ISO3 code 'XKX';	
	- XCA (Caspian Sea) has been removed from GADM level 0 and the area assigned to countries based on the extent of their territorial	
	waters;	
	- XAD (Akrotiri and Dhekelia), XCL (Clipperton Island), XPI (Paracel Islands) and XSP (Spratly Islands) are not included in the	
	Climate TRACE dataset; - ZNC name changed to 'Turkish Republic of Northern Cyprus' at GADM level 0;	
	- The borders between India, Pakistan and China have been assigned to these countries based on GADM codes Z01 to Z09.	
	- Two IDs have been created for a region in UKR with missing IDs (at Level 1 and Level 2).	
	- UNK added to GADM level 0 to denote 'unknown' countries, which primarily applies to non-broadcasting-vessels whose port	
	berthing locations are not known.	
	- TUR name changed to "Türkiye"	
	- SWZ name changed to "Eswatini"	
	- Missing Con Dao Island added as VNM.7.X_1 and Kili Island added as MHL.X_1.	
City level	The Global Human Settlements Layer - Functional Urban Areas (2019).
